## Recommandations ESC 2024

### Recommendation Table 30 — Recommendations for treatment of revascularization failure (see also Evidence Table 30)

Recommendations	Class <sup>a</sup>	Level <sup>b</sup>
DES is recommended over drug-coated balloons for treatment of in-DES restenosis. <sup>1186–1188</sup>	I	A
LIMA is indicated as the conduit of choice for redo CABG in patients in whom the LIMA was not used previously. <sup>1195</sup>	I	B
Redo CABG should be considered for patients without a patent LIMA graft to the LAD. <sup>842,1192,1196</sup>	IIa	B
PCI of the bypassed native artery should be considered over PCI of the bypass graft. <sup>1197</sup>	IIa	B

## 1. Define

Identify  
the culprit  
ISR lesion

Assess lesion  
length & severity  
using orthogonal  
projections

Use IVI  
to define  
ISR

## 2. Prepare

Routine  
predilatation  
of all  
lesions

Use  
high pressure,  
cutting or scoring  
balloons

Address  
all  
mechanical  
factors

## 3. Treat

DES ISR:  
DES or DCB

BMS ISR:  
DCB or DES

Assess  
PCI result  
using IVI

## Intracoronary imaging for the assessment of stent failure

underlying, stent-related, predisposing mechanical problems.<sup>386,387</sup> Liberal use of intracoronary imaging in order to detect and modify underlying mechanical factors is recommended (Figure 7) (see section 16.2).

Recommendations	Class <sup>a</sup>	Level <sup>b</sup>
IVUS or OCT should be considered in selected patients to optimize stent implantation. <small>603,612,651–653</small>	IIa	B
IVUS should be considered to optimize treatment of unprotected left main lesions. <sup>35</sup>	IIa	B

# Imagerie & complication stenting

## Les limites

Attendre disparition thrombus en OCT

Difficultés de franchissement

Plusieurs causes présentes

# Conclusions

## Apport de l'imagerie endocoronaire
